Special Announcement

- If this device is installed in places where thunder and lightning frequently occur, ground the device nearby to discharge high energy such as thunder strikes in order to prevent device damage.

**CAUTION**

- Avoid heavy loads, intensive shakes, and soaking to prevent damages during transportation and storage. The warranty does not cover any device damage that is caused during secondary packaging and transportation after the original packaging is taken apart.

- Protect this device from fall-down and intensive strikes, keep the device away from magnetic field interference, and do not install the device in places with shaking surfaces or under shocks.

- Clean the device with a soft dry cloth. For stubborn dirt, dip the cloth into slight neutral cleanser, gently wipe the dirt with the cloth, and then dry the device.

- Do not jam the ventilation opening. Follow the installation instructions provided in this document when installing the device.

- Keep the device away from heat sources such as radiators, electric heaters, or other heat equipment.

- Keep the device away from moist, dusty, extremely hot or cold places.

- If the device is installed outdoors, take insect- and moisture-proof measures to avoid circuit board corrosion that can affect monitoring.

- Remove the power plug if the device is idle for a long time.

- When unpacking, please first confirm whether fragile label is damaged. If damaged, please contact customer service or sales personnel in time. The company will not be liable for any human-made damage to fragile labels.

Precautions

- Fully understand this document before using this device, and strictly observe rules in this document when using this device. If you install this device in public places, provide the tip “You have entered the area of electronic surveillance” in an eye-catching way.

**WARNING**

- It alerts you to moderate dangers which, if not avoided, may cause minor or moderate injuries.

**CAUTION**

- It alerts you about risks. Neglect of these risks may cause device damage, data loss, device performance deterioration, or unpredictable results.

**NOTE**

- It provides additional information.

- Strictly observe installation requirements when installing the device. The manufacturer shall not be liable for device damage caused by users’ non-conformance to these requirements.

- Strictly conform to local electrical safety standards and use power adapters that are marked with the LPS standard when installing and using this device. Otherwise, this device may be damaged.

- Use accessories delivered with this device. The voltage must meet input voltage requirements for this device.

- If this device is installed in places with unsteady voltage, ground this device to discharge high energy such as electrical surges in order to prevent the power supply from burning out.

- When this device is in use, ensure that no water or any liquid flows into the device. If water or liquid unexpectedly flows into the device, immediately power off the device and disconnect all cables (such as power cables and network cables) from this device.

**CAUTION**

- The hard disks of the NVR must be provided by the user. The manufacturer shall not be liable for any damages during transportation and storage. The warranty does not cover any device damage caused by using counterfeit products.

2.2 Device Dimensions

**NOTE**

- Different devices may have different dimensions; Please refer to the actual product.

3 Device Installation

The hard disks of the NVR must be provided by the user. Take the following steps to install the hard disks:

- Step 1 Remove the screws for fixing the cover and take down the cover. Remove the screws of bracket and side way, take over the panel.
- Step 2 Put the four hard disks under panel, then fix the screws for hard disk, as shown in figure.

Figure 3-1 Remove the screws and panel

3.1 Device Ports

**NOTE**

- Different devices may have different ports and multi-head cables; Please refer to the actual product.

For front panel description of device refer to table 2-1.

Figure 3-2 Fix the hard disk panel

Step 3 Replace the hard disk panel to device and fasten the screws, insert the hard disk data cables and power cables, then replace the upper cover and fasten the fixing screws.
4 Device Operation

4.1 Startup
Before starting NVR, ensure that the NVR is connected to a power supply properly and a monitor is connected to the HDMI or VGA interface of the NVR correctly. After starting the NVR, there is a login window located in the center, as shown in figure 4-1. In some environments, if the power supply is abnormal, the NVR will not work properly. In severe cases, the NVR may be damaged. In these environments, it is recommended to use regular power supply.

4.2 Topology of the NVR
For the cameras and NVR device are on Internet, or at same network. NVR and IP cameras can communicate with each other smoothly with WAN port. Figure 4-3 shows the network topology of the NVR.

4.3 Special Function
Some functions are applicable for some special cameras, such as Microphone, Humanthermometer, Smart, Intelligent Analysis, Advanced Intelligent Analysis, please refer to actual camera channels.

4.4 Power off
Enter the Main menu > System > Maintenance > Shutdown to power off the NVR. Or turn off the power switch.

4.4 Quick menu
Put the mouse arrow on bottom of live video interface, the quick menu will be showing. You can set layout to view live video, switch the split screen, auto sequence, playback and so on.

5 Quick Configuration
Plug in power to access the NVR user page. The wizard window would show at first time, users can configure quickly or close immediately. For configuration details please refer to main menu. Right-click on the main interface at any where to access the main menu. Main menu comprises Channel, Record, Alarm, Network and System setting, as shown in figure 5-1.

5.1 Channel
Channel settings contain Camera, Encode, Image, OSD, Privacy Zone, ROI (region of interest), Microphone, Humanthermometer, Smart, and Intelligent tracking.

5.2 Record
Record settings contain Record Schedule, Disk, Storage, RAID, S.M.A.R.T, Disk Detection, Disk Calculation and FTP.

5.3 Alarm
Alarm settings contain General, Motion Detection, Video Loss, Advanced Intelligent Analysis, Intelligent Analysis, Alarm in, Abnormal Alarm, Alarm out and Local intelligent analysis, as shown in figure 5-2.

5.4 Network
Network settings contain Network, 802.1X, DDNS, E-mail, Port Mapping, P2P, IP Filter, SNMP, 3G/4G, PPPoE, Network Traffic and Client Access, as shown in figure 5-3.

5.5 System
System settings contain Information, General, User Account, Security Center, Layout, Auxiliary Screen, Logs, Maintenance and Auto Reboot, as shown in figure 5-4.

5.6 Live Video
Under the user name and password in login interface, and click Login to enter the real-time video interface. As shown in Figures 5-5.

6 Mobile Client
Search for ‘IRView Pro’ in App Store or Google Play to download and install the App. Use the App to scan the QR code, which you can find on the backboard of the NVR and on P2P settings page (Main menu > Network > P2P) in user interface. Then input the NVR’s user name and password to add the NVR to the device list. Users can manage the device on the APP.

7 Web Accessing
The NVR also can be accessed in a Web browser. Open a web browser like Chrome 45 and enter the IP address of device (the default IP address is 192.168.0.121) in the address box, and press Enter. The login page is displayed as shown in figure 7-1.
