Bi-spectrum Network Camera User Manual

Issue V 1.0 Data 2022-08-04

Precautions

Precautions

Fully understand this document before using this device, and strictly observe rules in this document when using this device. If you install this device in public places, provide the tip "You have entered the area of electronic surveillance" in an eye-catching place. Failure to correctly use electrical products may cause fire and severe injuries. To prevent accidents, carefully read the following context:

Symbols

This document may contain the following symbols whose meanings are described accordingly.

| Symbol | Description |
|--------------------|--|
| | It alerts you to fatal dangers which, if not avoided, may cause deaths or severe injuries. |
| | It alerts you to moderate dangers which, if not avoided, may cause minor or moderate injuries. |
| | It alerts you to risks. Neglect of these risks may cause device damage, data loss, device performance deterioration, or unpredictable results. |
| © ^t TIP | It provides a tip that may help you resolve problems or save time. |
| | It provides additional information. |

To prevent electric shocks or other dangers, keep power plugs dry and clean.

 Strictly observe installation requirements when installing the device. The manufacturer shall not be held responsible for device damage caused by users' nonconformance to these requirements.

- Strictly conform to local electrical safety standards and use power adapters which are marked with the LPS standard when installing and using this device. Otherwise, this device may be damaged.
- Use accessories delivered with this device. The voltage must meet input voltage requirements for this device.
- If this device is installed in places with unsteady voltage, ground the device to discharge high energy such as electrical surges in order to prevent the power supply from burning out.
- When this device is in use, ensure that no water or any liquid flows into the device. If
 water or liquid unexpectedly flows into the device, immediately power off the device
 and disconnect all cables (such as power cables and network cables) from this device.
- Do not place the thermal imaging camera and unpackaged products at a radiation source with a high intensity regardless of whether the device is in the normal poweron state, for example, the sun, laser, and electric arc welder, and place the thermal imaging camera and unpackaged products against objects with a high heat source, for example, the sun. Otherwise, the accuracy of the thermal imaging camera will be affected. In addition, the detector in the thermal imaging camera may be permanently damaged.
- If this device is installed in places where thunder and lightning frequently occur, ground the device nearby to discharge high energy such as thunder strikes in order to prevent device damage.

- Unless otherwise specified in the user manual, do not use the thermal imaging camera in an environment with the temperature lower than -20°C (-4 F) or higher than 60°C (+140 F). Otherwise, the images displayed by the thermal imaging camera are abnormal and the device may be damaged if working beyond the temperature range for a long period.
- During the outdoor installation, prevent the morning or evening sunlight incidence to the lens of the thermal imaging camera. The sun shade must be installed and adjusted according to the angle of the sunlight illumination.
- Avoid heavy loads, intensive shakes, and soaking to prevent damages during transportation and storage. The warranty does not cover any device damage that is caused during secondary packaging and transportation after the original packaging is taken apart.
- This device is a static sensitivity device. Improper static may damage the thermal imaging camera. ESD protection measures and reliable grounding must be well prepared for device installation and uninstallation.
- Protect this device from fall-down and intensive strikes, keep the device away from magnetic field interference, and do not install the device in places with shaking surfaces or under shocks.
- Use a soft and dry cloth to clean the device body. In case that the dirt is hard to remove, use a dry cloth dipped in a small amount of mild detergent and gently wipe

the device, and then dry it again. Pay special attention to the front window of the thermal imaging camera because this is precision optics. If the front window has water spots, use a clean and soft cloth moistened with water to wipe it. If the front window needs further cleaning, use a soft cloth dampened with isopropyl alcohol or detergent. Improper cleaning can cause damage to the device.

- The lens window of the thermal imaging camera is designed to be applicable to an outdoor environment. The window is coated with durable coating material, but may require frequent cleaning. When you found lens image degradation or excessive accumulation of pollutants, you should clear up the window in a timely manner. Exercise caution when you use this device in severe sandstorm (such as deserts) or corrosive environments (such as offshore). Improper use may cause surface coating off.
- Do not jam the ventilation opening. Follow the installation instructions provided in this document when installing the device.
- Keep the device away from heat sources such as radiators, electric heaters, or other heat equipment.
- Keep the device away from moist, dusty, extremely hot or cold places, or places with strong electric radiation.
- If the device is installed outdoors, take insect- and moisture-proof measures to avoid circuit board corrosion that can affect monitoring.
- Remove the power plug if the device is idle for a long time.
- Before unpacking, check whether the fragile sticker is damaged. If the fragile sticker is damaged, contact customer services or sales personnel. The manufacturer shall not be held responsible for any artificial damage of the fragile sticker.

Special Announcement

All complete products sold by the manufacturer are delivered along with nameplates, operation instructions, and accessories after strict inspection. The manufacturer shall not be held responsible for counterfeit products.

This manual may contain misprints, technology information that is not accurate enough, or product function and operation description that is slightly inconsistent with the actual product. The manufacturer will update this manual according to product function enhancement or changes and regularly update the software and hardware described in this manual. Update information will be added to new versions of this manual without prior notice.

This manual is only for reference and does not ensure that the information is totally consistent with the actual product. For consistency, see the actual product.

1 Product Overview

1.1 About Product

- The Bi-spectrum network camera is integrated with the thermal imaging and temperature measuring, visible fusion, core image intelligent analysis, etc.
- Unique double registration mechanism, visible light and thermal imaging is reflecting the same scene.
- The Bi-spectrum network camera is high precision, built-in automatic temperature correction, completely eliminate the temperature drift, it can work stable and reliable for long time.
- Intelligent temperature and visible light image channel display details information to easily monitor and discriminate.
- Smart over temperature alarm and location, sound and light alarm, track rapidly when temperature was abnormal.

It can be widely used in important fields such as airports, stations, urban roads, traffic surveys, corporate security, warehouse monitoring, and residential security.

1.2 Device Dimension

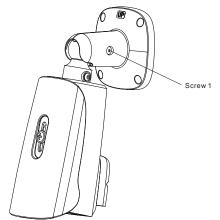

Figure 1-1 shows the dimensions of device.

Figure 1-1 Dimensions (unit: mm)

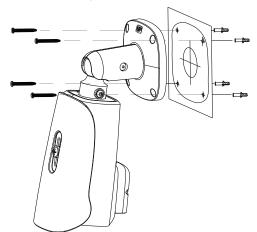

1.3 Installation

- Step 1 Stick the installation location sticker on ceiling or wall, drill four holes based on the marks on the sticker. Drive the swell plastic buttons into holes.
- Step 2 Loosen screw 1 to free the body to easy to install the fixed screws of camera. This step before mount is highly suggested to make it convenient to use electric screwdriver, as shown in Figure 1-2.

Figure 1-2 Adjust direction

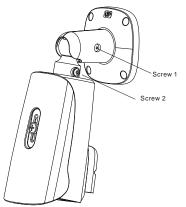

Step 3 Install the camera on the ceiling or wall and fixe the screws as shown in Figure 1-3. Figure 1-3 Fix camera

Step 4 Connect the multi-connector cable and monitor, loosen the screw 2 to adjust the position so that the camera face the monitored area, as shown in Figure 1-4. Tighten the screw 1 and screw 2.

Figure 1-4 Adjust image

1.4 Cable Connection

The different models may have different cables, please refer to actual product.

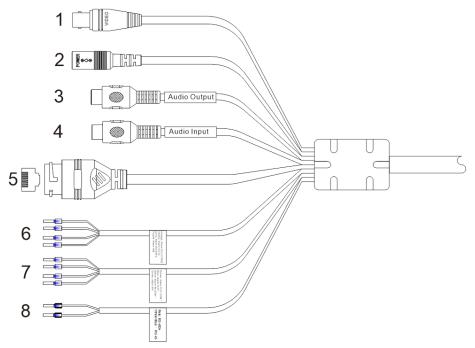

Figure 1-5 Multi-connector combination cable

Table 1-1 Multi-connector combination cable

| ID | Core of Cable | Functions |
|----|---------------------|---|
| 1 | Analog Video Output | Connect the BNC connector. Some models may not have this cable, please refer to actual product. |
| 2 | DC12V (2A) | Power interface, connects to the 12 V DC power supply. |
| 3 | Audio Input | Input the audio signal and receives the analog audio signals from the sound pick-up device. |
| 4 | Audio Output | Connect to the external audio device such as the voice box. |
| 5 | Network interface | Connect to the standard Ethernet cable. |

| 6 | Audio Output | Connect to the external audio device such as the voice box. |
| 7 | Audio Input | Input the audio signal and receives the analog audio signals from the sound pick-up device. |

2 Quick Configuration

2.1 Login and Logout

To access the web interface through Edge browser (IE Mode); Otherwise, some functions may be unavailable.

Login system

Step 1 Open the Microsoft Edge, enter the IP address of IP camera (default value: 192.168.0.121) in the address box, and press Enter.

The login page is displayed, as shown in Figure 2-1.

Figure 2-1 Login page

| IP CAMERA | | |
|-----------------------|----------|--|
| | English▼ | |
| User Name Password | - | |

Step 2 Input the User and password.

• Access the web at Edge browser which the mode should switch to **Reload in Internet Explorer mode**. At browser "Setting > Default browser" page, Let Internet Explorer open sites in Microsoft Edge choose "Always (Recommenced)"; Allow sites to be reloaded in Internet Explorer mode (IE mode) choose "Allow".

• The default name and password are both admin. Modify the password when you login the system for first time to ensure system security.

• After modifying password, you need to wait at least three minutes then power off to make sure modifying successfully . Or login the Web again to test the new password.

• You can change the system display language on the login page.

Step 3 Click Login arrow to enter main interface.

----End

Logout

Click 📑 in the top right to back to Web Login.

----End

2.2 Homepage Layout

On the homepage, user can view real-time video, playback, personnel Count and configuration. User can set Sensor parameters, Video parameter, Video control, and logout of the system. Figure 2-3 is shown the homepage layout. Table 2-1 lists the elements on the homepage layout.

Figure 2-3 Homepage layout

| Table 2-1 Elements on the homepage | | |

| | | click to open the intelligent analysis, it will show target information and video stream draw line after you have |
| | | turned on the function in IAS settings. |

When the device generates an alarm, the alarm icon is displayed. You can click to view the alarm information.

When the device accepts an alarm signal, the alarm icon will display within 10s in the web management system.

----End

2.3 Changing the Password

Description

User can click it change the password for logging into the system.

Procedure

Step 1 Click

📝 in

in the upper right corner of the main page.

The Change Password dialog box is displayed, as shown in Figure 2-4.

Figure 2-4 Change password dialog box

| Change Password | × | | | |
|---|---|--|--|--|
| Old Password | | | | |
| New Password | | | | |
| Confirm | | | | |
| Password Advice: 1.Advice the password length of eight characters. | | | | |

2. Advice the password includes numbers, capital letters, lowercase letters and special characters.

3.Advice the password can not be the same as username.

| OK | Cancel |
|----|--------|
| | |

🛄 ΝΟΤΕ

- The change password page will be displayed if you don't change the default password when you login the system for the first time.
- Step 2 Input the old password, new password, and confirm password.

Step 3 Click OK.

If the message "**Change password success**" is displayed, the password is successfully changed. If the password fails to be changed, the cause is displayed. (For example, the new password length couldn't be less than eight.)

----End

2.4 Browse Video

User can browse the real-time video in the web management system.

Preparation

To ensure the real-time video can be played properly, you must perform the following operations when you log in to the web for the first time:

Step 1 Open Microsoft Edge. Choose Control Panel > Internet options > Security > Trusted sites > Sites.

In the display dialog box, click **Add**, as shown in Figure 2-5.

Figure 2-5 Adding a trusted site

| Internet Options | ? × | Trusted sites \times |

| Move the slider to set the security level for this zone | Prompt Download unsigned ActiveX controls Reset custom settings Reset to: Medium Reset OK Cancel |
| OK Cancel Apply | |

Figure 2-6 Configuring ActiveX control and plug-ins

Step 3 Download and install the player control as prompted.

🛄 ΝΟΤΕ

- The login page is displayed when the control is loaded.
- If you can view the live video immediately, you can ignore the steps of adding trust site.

2.4.1 Install Plugins

You will be prompted with a message "Download and install the new plugin" as shown in Figure 2-7 when you log in to the web management system for the first time.

Figure 2-7 Download the plugin page

Procedure

- Step 1 Click the message, download and install the plugin follow the prompts.
- Step 2 Reopen the browser after installation.
- Step 3 On live video page, you can operate these buttons as shown in live video.

- Channel switch, click the live video, the red frame means the chosen channel.
- During installing plugins, you need to close the browser, finish the installation, login the device again.

----End

2.5 Personnel Count

At **personnel count** interface, you can view the personnel count throughout setting query condition (choose the detail time at date's pop up window).

There are three modes to show the data, such as line chart, histogram, and list, as shown in Figure 2-8.

| P CAMERA | Live Video | Playback | Personnel Count | Configuration | | ٥ |
|-----------------------------|--------------------------|---------------------|---------------------------|----------------|-------------------|----|

Figure 2-8 Personnel count interface

Click "Download" to download the query result.

Choose the mode of showing result, such as line chart, histogram, list.

Click "Query" to query the data of personnel count.

User can download the result to local folder.

----End

2.6 Setting Local Network Parameters

Description

Local network parameters include:

- IP protocol
- IP address
- Subnet mask
- Default gateway
- Dynamic Host Configuration Protocol (DHCP)
- Preferred Domain Name System (DNS) server
- Alternate DNS server
- MTU

Procedure

Step 1 Choose Configuration > Device >Local Network.

The Local Network page is displayed, as shown in Figure 2-9.

Figure 2-9 Local network

| ÷ | Local | Network |
|---|-------|---------|
|---|-------|---------|

| Network Card ID | 1 🔻 |
|----------------------|---------------|
| IP Protocol | IPv4 ▼ |
| DHCP | OFF |
| IP Address | 192.168.0.121 |
| Subnet Mask | 255.255.255.0 |
| Default Gateway | 192.168.0.1 |
| Preferred DNS Server | 192.168.0.1 |
| Alternate DNS Server | 192.168.0.2 |
| MTU(1280-1500) | 1500 |

| Parameter | Table 2-2 Local network parame Description | Setting |
|-------------|---|--|
| IP Protocol | IPv4 is the IP protocol that uses an address length of 32 bits. | [Setting method] Select a value from the drop-down list box. [Default value] IPv4 |
| DHCP | The device automatically obtains the IP address from the DHCP server. | [Setting method] Click the option button. NOTE To query the current IP address of the device, you must query it on the platform based on the device name. |
| DHCP IP | IP address that the DHCP server assigned to the device. | N/A |
| IP Address | Device IP address that can be set as required. | [Setting method] Enter a value manually. [Default value] 192.168.0.121 |
| Subnet Mask | Subnet mask of the network adapter. | [Setting method] Enter a value manually. [Default value] 255.255.255.0 |

Step 2 Set the parameters according to Table 2-2.

Table 2-2 Local network parameters

| Parameter | Description | Setting |
|-------------------------|---|--|
| Default Gateway | This parameter must be set if the client accesses the device through a gateway. | [Setting method] Enter a value manually. [Default value] 192.168.0.1 |
| Preferred DNS Server | IP address of a DNS server. | [Setting method] Enter a value manually. [Default value] 192.168.0.1 |
| Alternate DNS Server | IP address of a domain server. If the preferred DNS server is faulty, the device uses the alternate DNS server to resolve domain names. | [Setting method] Enter a value manually. [Default value] 192.168.0.2 |
| MTU | Set the maximum value of network transmission data packets. | [Setting method] Enter a value manually. NOTE The MTU value is range from 1280 to 1500, the default value is 1500, Please do not change it arbitrarily. |

Step 3 Click OK.

- If the message "Apply success" is displayed, click OK. The system saves the settings. The message
 "Set network pram's success, Please login system again" is displayed. Use the new IP address to
 log in to the web management system.
- If the message "Invalid IP Address", "Invalid Subnet Mask", "Invalid default gateway", "Invalid primary DNS", or "Invalid space DNS" is displayed, set the parameters correctly.

- If you set only the Subnet Mask, Default Gateway, Preferred DNS Server, and Alternate DNS Server parameters, you do not need to login to the system again.
- You can click Reset to restore the previous parameters if required.

----End

3 Temperature Measurement

3.1 Temperature Parameters

Temperature parameters include temperature unit, ambient type, ambient temperature, cavity temperature, correctional coefficient, area temperature display mode, area temperature type, measure mode, and area alarm interval.

Operation Procedure

Step 1 Choose Configuration > Thermal > Temperature Parameters.

The Temperature Parameters page is displayed, as shown in Figure 3-1.

Figure 3-1 Temperature parameters interface

🚖 Temperature Parameters

| Open Temperature Measure | ON |
|-------------------------------|-----------------------|
| Temperature Units | Celsius |
| Length Units | ? Meters |
| Cavity Temperature | 34.95 |
| Correction Coefficient | 0.00 |
| Area ID Display Mode | Area ID 🔹 |
| Area Temperature Display Mode | Low Left |
| Font Border | ON (|
| Font Size | Mid |
| Area Temperature Type | Highest Temperature & |
| Measure Mode | General |
| Display Alarm Area | OFF |
| Area Alarm Interval(1-1800S) | 10 |
| Area Alarm Delay(0-10Sec) | 0 |
| Temperature Range | -40.0 ~ 150.0 |
| Prevent Over Heat | Auto |
| Temper Duration(5-60Sec) | 60 |
| | |
| | Advanced |
| | |
| | |
| | Refresh Apply |

Step 2 Set the parameters according to Table 3-1.

Table 3-1 Temperature parameters

| Parameter | Description | Setting |
|------------------|--|---|
| Temperature Unit | Celsius and Fahrenheit temperature units are available. | [Setting method] Select a value from the drop-down list box. [Default value] Celsius |

| Parameter | Description | Setting |
|----------------------------------|--|---|
| Length Units | The unit of distance | [Setting method] Select a value from the drop-down list box. [Default value] Meters |
| Cavity Temperature | The cavity temperature of camera. | N/A |
| Correction Coefficient | Correction coefficient is refer to the deviation of measured object temperature and actual temperature, is offset value. For example: 1. The measured object temperature is 36.0, and actual temperature is 36.5, so the correction coefficient should be 0.5. 2. The measured object temperature is 37.3, and actual temperature is 36.5, so the correction coefficient should be -0.8. NOTE User should contact the technical support staff of our company at this condition to make sure to apply | [Setting method] Enter a value manually. [Default value] 0.00 |
| Area ID display mode | There two mode to display, area ID and area name | [Setting method] Select a value from the drop-down list box. [Default value] Area ID |
| Area Temperature Display Mode | The display position of temperature information on the live-video image. | [Setting method] Select a value from the drop-down list box. [Default value] Low left |
| Font Border | Enable to bold the font | [Setting method] Enable or disable [Default value] Disable |

| Parameter | Description | Setting |
|----------------------------------|--|---|
| Font size | Choose the size of font | [Setting method] Select a value from the drop-down list box. [Default value] Mid |
| Area Temperature Type | There are three types of area temperature. | [Setting method] Select a value from the drop-down list box. [Default value] Highest Temperature |
| Measure Mode | There are two types of measure modes. | [Setting method] Select a value from the drop-down list box. [Default value] General |
| Display Alarm Area | N/A | [Setting method] Enable or disable [Default value] Disable |
| Area Alarm Interval (1-1800s) | N/A | [Setting method] Enter a value manually ranges from 1 to 1800. [Default value] 10 |
| Area Alarm delay(0-10sec) | N/A | [Setting method] Enter a value manually ranges from 1 to 10. [Default value] 0 |
| Temperature range | It depends on the device. Different devices have different modes, there are two ranges, such as -20 °C -150°C, -40 °C- 150°C, the thermal imaging box network camera is -40 °C- 150°C. | [Setting method] Select a value from the drop-down list box. |

| Parameter | Description | Setting |
|----------------------------|---|--|
| Prevent Over Heat | Open, if temperature of the testing area is too high, you can enable prevent over heat function, there are two types, manual and auto. The auto mode is advised. | [Setting method] Select a value from the drop-down list box. |
| Temper Duration(5-60 S) | Prevent over heat' mode is auto, the control cover will block for duration time automatically if over heat. | [Setting method] Enter a value manually ranges from 5 to 60. |
| Control Cover | It is professional operation. When prevent over heat mode is manual, the user should choose the action manually, such as pick up, lay down. | [Setting method] Select a value from the drop-down list box. |

3.3 Temperature Area

Operation Procedure

Step 1 Choose Configuration > Thermal > Temperature Area.

The **Temperature Area** page is displayed, as shown in Figure 3-4.

Figure 3-4 Temperature area and alarm configuration

🚖 Temperature Area And Alarm Configuration

Step 2 Set the parameters according to Table 3-4.

| Parameter | Description | Setting |
|---------------|--|---|
| Channel | Channel 1 is visible light channel. Channel 2 is thermal channel. | [Setting method] Select a value from the drop-down list box. [Default value] 2 |
| Measure Mode | Set at temperature parameter interface. | N/A |
| Enable | Tick the ID to enable the area measuring. | [Setting method] Tick |
| Name | Area name of temperature area. | [Setting method] Enter a value manually. |
| Туре | Type of temperature area. ID 0 is default rectangle area, which is full screen. | [Setting method] Select a value from the drop-down list box. [Default value] Rectangle/Point |
| Alarm Type | Threshold alarm, temperature difference alarm, section alarm, temperature rise alarm are available for alarm type. Section Alarm: if the temperature value is among the set temperature range, it will generate the alarm. Temperature rise alarm means it the rising temperature value is more than the set value, it will generate the alarm. | [Setting method] Select a value from the drop-down list box. [Default value] Threshold alarm |
| Warning Value | Camera will trigger warning alarm when the object temperature reaches the warning value. | [Setting method] Enter a value manually. [Default value] 48 |
| Alarm Value | Camera will alarm when the object temperature reaches the alarm value. | [Setting method] Enter a value manually. [Default value] 50 |

Table 3-4 Temperature area and alarm configuration

| Parameter | Description | Setting |
|------------------------|---|---|
| Maximum Alarm Value | At section alarm type, the device would not alarm when the temperature is higher than maximum alarm value. | [Setting method] Enter a value manually. [Default value] 60.00 |
| Duration (1-10S) | Choose temperature rise alarm, set the duration, the temperature rise the value and it is kept for duration setting, the alarm is triggered successfully. | [Setting method] Enter a value manually. [Default value] 1.00 |
| Emission Rate | The emission rate is the capability of an object to emit or absorb energy. The emission rate should be set only when the target is special material. | [Setting method] Enter a value manually. [Default value] 0.95 |
| Distance(M) | The distance between camera and target. | [Setting method] Enter a value manually. [Default value] 15 ID NOTE Enter actual distance when the distance between camera and target is less than 15m.Enter 15 when the distance between camera and target is great than or equal to 15m. |
| Alarm | Enable or disable the alarm output and linkage of area. | [Setting method] Tick the alarm output channel. |

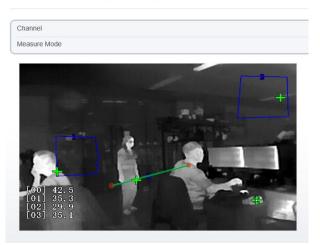

Step 3 Set temperature area.

Tick an area ID.

Press and hold the left mouse button, and drag in the video area to draw a temperature area, as shown in Figure 3-5. Right-click to finish the area selected.

Figure 3-5 Temperature area setting interface

😤 Temperature Area And Alarm Configuration

Click **Apply**, the message "Apply success" is displayed, the temperature area is set successfully.

ID 0 is the full screen; the area cannot be changed.

the lowest temperature of the full screen.

:the highest temperature of the full screen.

: the lowest temperature of the area.

: the highest temperature of the area.

Delete a temperature area:

Select an area ID.

Click the temperature area and right-click.

Remove the tick of area ID.

Click **Apply**, the message "Apply success" is displayed, the temperature area is deleted successfully.

Step 4 Click Apply.

The message "Apply success" is displayed, the system saves the settings.

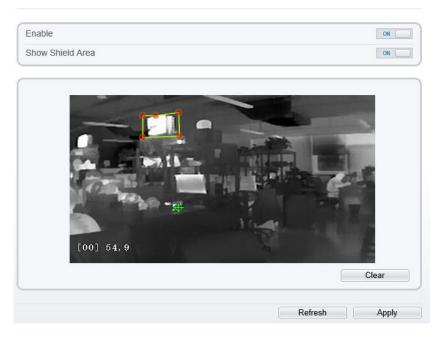

3.4 Shield Area

Shield area is meaning that the camera will do not detect the temperature of that area. The shield areas can be set up to four areas.

Operation Procedure

Step 1 Choose Configuration >Thermal > Shield Area. Figure 3-6 Shield area

🖻 Shield Area

- Step 2 Enable the shield area.
- Step 3 Enable Show Shield Area, then the setting shield will show on live video.
- Step 4 Click left mouse button to set area; click right mouse button to end the setting.
- Step 5 Click **Clear** to clear the shield area.

----End

3.5 Schedule Linkage

There are six types schedule linkage to set, like threshold alarm, threshold warning, temperature difference alarm, temperature difference warming, temperature section alarm, temperature rise alarm and temperature rise warning.

Operation Procedure

Step 1 Choose Configuration > Thermal > Schedule Linkage.

The **Schedule Linkage** page is displayed, as shown in Figure 3-7. Tick the output channel if user connects the external alarm device. It can also enable alarm record, SMTP, FTP upload, audio alarm and flashlight alarm.

Figure 3-7 Schedule linkage

Threshold Alarm Threshold Warning Temperature Difference Temperature Difference Temperature Section / Temperature Rise Ala Temperature Rise Wa $\Box 1 \Box 2$ Output Channel Alarm Record OFF SMTP OFF FTP Upload OFF Audio Detect Alarm OFF Flashlight Alarm OFF 60 10 12 13 14 15 16 17 18 19 20 21 22 23 24 8 ٥ 11 Sun 🕼 Mon 5 Tues Wed Thur Fri Sat Sa Refresh Apply

Step 2 Tick the output channel. Enable alarm record, SMTP, FTP upload, audio alarm and flashlight alarm.

Schedule Linkage

Step 3 Set schedule linkage.

Method 1: Click left mouse button to select any time point within 0:00-24:00 from Monday to Sunday as shown in Figure 3-7.

Method 2: Hold down the left mouse button, drag and release mouse to select the alarm time within 0:00-24:00 from Monday to Sunday.

When you select time by dragging the cursor, the cursor cannot be moved out of the time area. Otherwise, no time can be selected.

Method 3: Click 🚳 in the alarm time page to select the whole day or whole week.

Deleting alarm time: Click again or inverse selection to delete the selected alarm time.

Step 4 Click Apply.

The message "Apply success" is displayed, the system saves the settings.

• Alarm output: Users should connect the external alarm device (such as siren) to alarm output cables. The parameter can be set at "Configuration > Alarm > Alarm Output" interface, as shown in Figure 3-8.

Figure 3-8 Alarm output

🚖 Alarm Output

| Alarm Output | 1 |
|------------------------------|---------------|
| Name | |
| Valid Signal | Close |
| Alarm Output Mode | Switch Mode |
| Alarm Time(ms)(0:Continuous) | 0 |
| Timing Alarm Output | 077 |
| Manual control | Start Stop |
| | Refresh Apply |

Table 3-5 Alarm output

| Parameter | Description | Setting |
|--------------|--|--|
| Alarm Output | ID of the alarm output channel. NOTE The number of alarm output channels depends on the device model. | [Setting method] Select a value from the drop-down list box. [Default value] 1 |
| Name | Alarm output channel name. | [Value range] 0 to 32 bytes |
| Valid Signal | The options are as follows: Close : An alarm is generated when an external alarm signal is received. Open : An alarm is generated when no external alarm signal is received. | [Setting method] Select a value from the drop-down list box. [Default value] Close |

| Parameter | Description | Setting |
|---------------------------------------|---|--|
| Alarm Output Mode | When the device receives I/O alarm signals, the device sends the alarm information to an external alarm device in the mode specified by this parameter. The options include the switch mode and pulse mode. NOTE If the switch mode is used, the alarm frequency of the device must be the same as that of the external alarm device. If the pulse mode is used, the alarm frequency of the external alarm device can be configured. | [Setting method] Select a value from the drop-down list box. [Default value] Switch Mode |
| Alarm Time (ms) (0: Continuous) | Alarm output duration. The value 0 indicates that the alarm remains valid. | [Setting method] Enter a value manually. [Default value] 0 [Value range] 0 to 86400 seconds |
| Timing Alarm Output | Enable timing alarm output, set the schedule to time alarm. | [Setting method] Enable [Default value] OFF |
| Manual Control | Control the alarm output. | N/A |

- Alarm Record: Users insert the SD card in camera. The recording time is set at
- " Configuration > Device Record > Record Policy" interface.

• SMTP: At " **Configuration > Network > SNMP**" interface, users should set the parameters of SMTP in advance, as shown in Figure 3-9.

Figure 3-9 SMTP

| | FactorySetting | Reset | Save |

Figure 5-6 Set pseudocolor setting interface

- Step 1 Click Standard T in the lower left corner of Sensor Setting, and choose set pseudo color
- Step 2 Choose polarity/LUT mode from drop-list.
- Step 3 Enable or disable the temperature strip switch.
- Step 4 Click Save, the message "Save succeed" is displayed, the system saves the settings.

The temperatures of the temperature fields detected by the thermal imaging camera are separately mapped to values ranging from 0 to 255 by the algorithm. In the black/white display mode, this range is converted to the gray scale tones. For example, 0 indicates completely black, and 255 indicates completely white. The temperature field of the scene is converted to images by using the grayscale ranging from 0 to 255. Different polarity modes can be converted to different display images. The most common setting is white hot (a hotter object is displayed brighter than a colder object) or black hot (a hotter object is displayed darker than a colder object). The difference between two modes lies in that the temperatures corresponding to the darker one and the lighter one are reversed. Other modes include rainbow, ironbow, HSV, autumn, bone and so on.

Figure 5-7 FFC control interface

Table 5-1 lists the parameters on the FFC control interface.

Table 5-1 Parameters of FFC control interface

| Parameter | Description | Setting |
|-----------|--|--|
| FFC Mode | The internal of the thermal imaging camera may comprise the mechanical action correction mechanism that can periodically improve the image quality. This component is called flat field correction (FFC). When controlling the FFC, the FFC shields the sensor array, so that each portion of the sensor can collect uniform temperature fields (flat field). By means of FFC, the camera can update the correction coefficients to output more uniform images. Throughout the FFC process, the video image is frozen for two seconds and a static-frame image is displayed. After the FFC is complete, the image is automatically recovered. Repeated FFC operations can prevent the grainy and image | [How to set] Select from the drop-down list box. [Default value] Auto |

| Parameter | Description | Setting |
|--------------------------|---|---|
| | degradation problems. The FFC is especially important when the temperature of the camera changes. For example, after the camera is powered on or the ambient temperature is changed, you should immediately perform the FFC. Auto : In the Automatic FFC mode, the camera performs FFC whenever its temperature changes by a specified amount or at the end of a specified period of time (whichever comes first). When this mode is selected, the FFC interval (minutes) ranges from 5 to 30 minutes. The temperature change of the camera is based on the temperatures collected by the internal temperature probe. The temperature of the camera sharply changes when the camera is powered on. The FFC is relatively frequent, which is normal. Manual : In the manual FFC mode, the camera does not automatically perform the FFC based on the temperature change or the specified period. You can press the Do FFC button to select the manual FFC mode. When you feel that the image is obviously degraded but the automatic FFC is not performed, you can use the manual FFC function to check whether the image quality can be improved. | |
| FFC interval (min) | In the automatic FFC mode, the FFC interval ranges from 10 to 255 minutes. When the time reach to setting value, the camera does shutter adjust operation automatically. | [How to set] Select by dragging the slider. [Default value] 15 |
| Tempr interval | In the automatic FFC mode, the tempr interval value ranges from 5 to 255 degree centigrade. When the time reach to setting value, the camera does background adjust operation automatically. | [How to set] Select by dragging the slider. [Default value] 5 |
| Shutter initialization | Click the icon and shutter will be initialized | Manually |
| Shutter adjust | Click the icon and camera perform the action. | Manually |

6 Intelligent Analysis

There are many kinds of intelligent analysis, such as perimeter, single virtual fence, double virtual fences, multi loiter, converse, personnel count, enter area, leave area. The parameters of these analysis alarm are roughly similar, so we will describe someone in detail as reference.

6.1 Perimeter

Description

The perimeter function refers to that an alarm is generated when the targets of specified types (such as person, car, and both person and car) enter the deployment area.

Procedure

Step 1 Select Configuration > Intelligent Analysis > Perimeter to access the Perimeter interface, as shown in Figure 6-1.

Figure 6-1 Perimeter setting interface

Table 6-1 Parameter perimeter parameter description

| Parameter | Description | Setting |
|-------------|--|---|
| Channel | Channel 1: visible light. Channel 2: thermal. | Choose one channel to set. |
| Enable | Enable the button to enable the alarm. | [How to set] Click Enable to enable. [Default value] OFF |
| Sensitivity | The sensitivity of detecting the target, when the value is high, the target can be detected easily, but the accuracy will be lower. | [How to set] Choose from the drop-down list [Default value] 5 |

| Parameter | Description | Setting |
|--------------------------|---|---|
| Limit Target Type | Effective alarms are set based on target type, with options of Person or Car, person, car. When the device is used indoors, because of small space and large targets, to avoid wrong alarms are triggered by persons even if car is selected, it is recommended to set the target type to person for indoor use. | [How to set] Click to enable Limit Target Type. [Default value] OFF |
| Output Channel | If you check to set the Output Channel and the device is connected to an external alarm indicator, the alarm indicator signals when an alarm is triggered. | [How to set] Click to select an ID. |
| Audio detection alarm | Enable, when happen the alarm, it will be play audio to alarm. Choose the sound alarm file (set at the "Configuration > Alarm > Sound Alarm Output"). | [How to set] Click to enable Audio Detection Alarm [Default value] OFF |
| Flashlight alarm | Enable, when it is triggered alarm, it flashes the light. But when users set the display mode to Mode 5 at "Configuration > Thermal > Led Control Param "interface, the ligth will be always on for 15s, not flash when it is alarm. | [How to set] Click to enable Flashlight Alarm. [Default value] OFF |
| Alarm Record | If you install SD card, enable this function, the device will record the alarm video. | [How to set] Click to enable Alarm Record. [Default value] OFF |
| SMTP | Enable the button to enable SMTP serve. | [How to set] Click to enable SMTP. [Default value] OFF |
| FTP Upload | Enable the button to enable File Transfer Protocol. | [How to set] Click to enable FTP Upload. [Default value] OFF |

| Parameter | Description | Setting |
|---------------------------|---|---|
| Video Stream Draw Line | Enable the button to enable Video Stream Draw Line, the setting area frame will show on live video. | [How to set] Click to enable Video Stream Draw Line. [Default value] OFF |

Step 3 Set a deployment area. Move the cursor to the drawing interface and click to generate a point, move the cursor to draw a line, and then click to generate another point. This is how a line is generated. In this way, continue to draw lines to form any shape, and right-click to finish line drawing.

- A drawn line cannot cross another one, or the line drawing fails.
- Any shape with 8 sides at most can be drawn.
- The quantity of deployment areas is not limited yet and will be described in future when a limit is applied.
- Step 4 Set deployment time.

Method 1: Click left mouse button to select any time point within 0:00-24:00 from Monday to Sunday as shown in Figure 6-2.

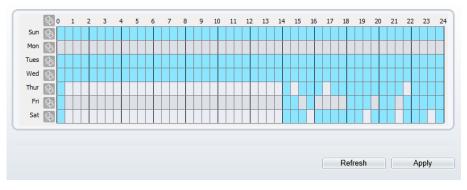

Method 2: Hold down the left mouse button, drag and release mouse to select the deployment time within 0:00-24:00 from Monday to Sunday.

Method 3: Click in the deployment time page to select the whole day or whole week.

• When you select time by dragging the cursor, the cursor cannot be moved out of the time area. Otherwise, no time can be selected.

Deleting deployment time: Click again or inverse selection to delete the selected deployment time.

----End

6.2 Single Virtual Fence

Description

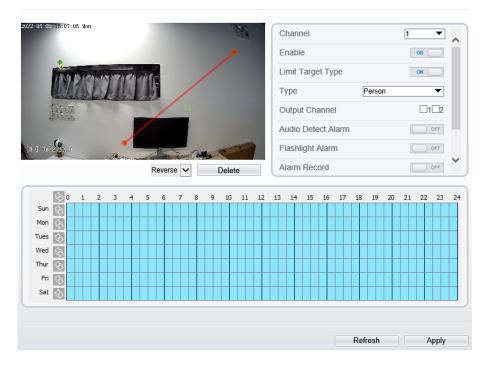

A single virtual fence is a line that is set at a concerned position within the monitored field of view and specifies the forbidden travel direction; An alarm is generated when the targets of specified types (such as person or car) cross this line.

Procedure

Step 1 Select Configuration > Intelligent Analysis > Single Virtual Fence to access the Single Virtual Fence setting interface, as shown in Figure 6-3.

Figure 6-3 Single virtual fence setting interface

로 Single Virtual Fence

Step 2 Set all parameters for the single virtual fence. Table 6-2 describes the specific parameters.

| Table | e 6-2 Pa | rameter | s of single | e virtual f | fence | |
|-------|----------|---------|-------------|-------------|-------|--|
| | | | | | | |

| Parameter | Description | Setting |
|-----------|--|---|
| Channel | Channel 1: visible. Channel 2: thermal. | [How to set] Choose one channel to set. |
| Enable | Enable the button to enable the alarm. | [How to set] Click Enable to enable. [Default value] OFF |

| Parameter | Description | Setting |
|-----------------------|---|---|
| Limit Target Type | Effective alarms are set based on target type, with options of Person or Car, person, car. When the device is used indoors, because of small space and large targets, alarms are triggered by person sometimes even if car is selected, leading to false alarms. It is recommended to set the target type to person for indoor use. | [How to set] Click to enable Limit Target Type. [Default value] OFF |
| Output Channel | If you check to set the Output Channel and the device is connected to an external alarm indicator, the alarm indicator signals when an alarm is triggered. | [How to set] Click to select an ID. |
| Audio detection alarm | Enable, when happen the alarm, it will be play audio to alarm. Choose the sound alarm file (set at the "Configuration > Alarm > Sound Alarm Output"). | [How to set] Click to enable Audio Detection Alarm [Default value] OFF |
| Flashlight alarm | Enable, when it is triggered alarm, it flashes the light. But when users set the display mode to Mode 5 at "Configuration > Thermal > Led Control Param"interface, the ligth will be always on for 15s, not flash when it is alarm. | [How to set] Click to enable Flashlight Alarm. [Default value] OFF |
| Alarm Record | If you install SD card, enable this function, the device will record the alarm video. | [How to set] Click to enable Alarm Record. [Default value] OFF |
| SMTP | Enable the button to enable SMTP sever. | [How to set] Click to enable SMTP. [Default value] OFF |

| Parameter | Description | Setting |
|------------------------|--|---|
| FTP Upload | Enable the button to enable File Transfer Protocol. | [How to set] Click to enable FTP. [Default value] OFF |
| Video Stream Draw Line | Enable the button to enable Video Stream Draw Line, the setting area frame will show on live video. | [How to set] Click to enable Video Stream Draw Line. [Default value] OFF |

Step 3 Set a deployment area:

Draw a line: move the cursor to the drawing interface, hold down the left mouse button, and move the cursor to draw a line. When you release the left mouse button, a single virtual fence is generated.

Setting a single virtual fence: Click a line (and the trip line turns red) to select the single virtual fence and set its direction as Positive, Reverse or Bidirectional, or delete the selected line. You can also press and hold left mouse button at the endpoint of a single virtual fence and move the mouse to modify the position and length of this single virtual fence. You can right-click to delete the single virtual fence.

🛄 ΝΟΤΕ

- A single virtual fence is not within any deployment area, therefore, when an alarm is generated, the trace always exists. Only when the target object moves out of the field of view, the trace disappears.
- Try to draw the single virtual fence in the middle, because the recognition of a target takes time after target appearance on the screen and an alarm is generated only when the object is recognized to have crossed the single virtual fence.
- The single virtual fence which detects person foot as the recognition target cannot be too short, because a short single virtual fence tends to miss targets.

Step 4 Set deployment time.

----End

6.3 Double Virtual Fences

Description

Double virtual fences refer to two lines that are set at a concerned special position within the field of view and specify the forbidden travel direction. When the targets of specified types (such as person or car) move along the set travel direction and cross these lines in a certain order (line 1 followed by line 2) in pass max time, an alarm is generated.

Procedure

Step 1 Select Configuration > Intelligent Analysis > Double Virtual Fences to access the Double Virtual Fences setting interface, as shown in Figure 6-4. Figure 6-4 Double virtual fences setting interface

022-05-07 17:12:02 Sat Channel 1 • Enable ON Limit Target Type ON Person Or Car Туре • Output Channel $\Box 1 \Box 2$ Audio Detect Alarm OFF Flashlight Alarm OFF Alarm Record Reverse 🗸 Delete 17 0 10 10 18 20 21 22 23 8 9 11 12 13 14 15 16 19 24 Sun Mon 3 Tues 3 Wed 🔄 Thur 3 Fri Sat 🔄 Refresh Apply

2 Double Virtual Fences

Step 2Set all parameters for the double virtual fences. The details please refer to Table 6-2Step 3Set a deployment area.

Draw a line: move the cursor to the drawing interface, hold down the left mouse button, and move the cursor to draw two lines. When you release the left mouse button, two

numbered virtual fences are generated. Choose either of the double virtual fences to set the direction to Positive or Reverse.

Set double virtual fences: Click one of the double virtual fences (and the virtual fence turns red) to select this virtual fence and set the direction to **Positive** or **Reverse**, or delete the selected line. You can also press and hold left mouse button at the endpoint of a virtual fence and move the mouse to modify the position and length of this virtual fence. You can right-click to delete the double virtual fences.

🛄 ΝΟΤΕ

- The two virtual fences are in sequential order. An alarm is generated only when a target crosses virtual fence 1 and then virtual fence 2 within the set maximum passing time.
- The double virtual fences are not within any deployment area, therefore, when an alarm is generated, the trace always exists. Only when the target object moves out of the field of view, the trace disappears.
- Try to draw double virtual fences in the middle, because the recognition of a target takes time after target appearance on the screen and an alarm is generated only when the object is recognized to have crossed the double virtual fences.
- The double virtual fences which detect person foot as the recognition target cannot be too short, because short double virtual fences tend to miss targets.

Step 4 Set deployment time.

----End

6.4 Personnel Count

Description

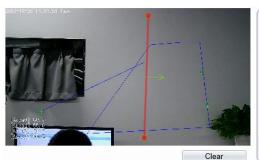

User can draw line to count the personnel at the special area.

Procedure

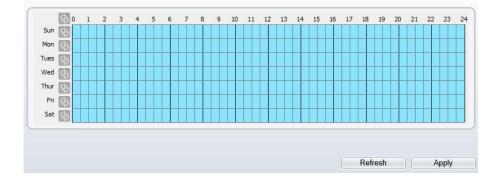

Step 1 Select Intelligent Analysis > Personnel Count to access the Personnel Count setting interface, as shown in Figure 6-5.

Figure 6-5 Personnel count

🖻 Personnel Count

| Channel | 1 🔻 | ~ |
|-------------------------|----------------|---|
| Enable | ON | |

Step 2 Set all parameters for enter area, The details please refer to *Table 6-1*.

Step 3 Set a deployment area.

Move the cursor to the drawing interface and click to generate a point, move the cursor to draw a line, and then click to generate another point. This is how a line is generated. In this way, continue to draw lines to form any shape, and right-click to finish line drawing.

- A drawn line cannot cross another one, or the line drawing fails.
- The quantity of deployment areas is not limited yet and will be described in future when a limit is applied.
- Step 4 Set deployment time .

---End

7 Advanced Intelligent Analysis

At advanced intelligent analysis interface, users can set the parameters of smoker detection, smoke and flame detection, fire spot detection. Enable the linkage actions, the alarm information can be sent to user by the linkage.

The advanced intelligent analysis can be used for detecting the smoking, if someone smoke in the indoor where is forbidden smoking.

Smoke and Flame Detection can be used for detecting smoke and fire, it can be sent alarm information to avoid fire getting worse.

Fire Spot Detection can be used for finding the catching fire to quickly operate to extinguish.

7.1 Smoker Detection

Description

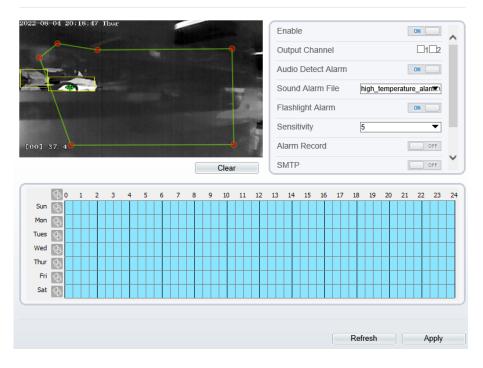

The smoker detection function refers to that an alarm is generated when someone is smoking or generating spark at the deployment area.

Procedure

Step 1 Select Configuration > Advanced Intelligent Analysis > Smoker Detection to access the Smoker Detection interface, as shown in Figure 7-1.

🚖 Smoker Detection

Step 2 Set all parameters for perimeter. Table 7-1 describes the specific parameters.

| Table 7-1 Parameters of smoker detection | |
|--|--|
|--|--|

| Parameter | Description | Setting |
|----------------|--|--|
| Enable | At thermal channel, Enable the button to enable the alarm. | [How to set] Click Enable to enable. [Default value] OFF |
| Output Channel | If you check to set the Output Channel and the device is connected to an external alarm indicator, the alarm indicator signals when an alarm is triggered. | [How to set] Click to select an ID. |

| Parameter | Description | Setting |
|---------------------------|--|---|
| Audio detection alarm | Enable, when happen the alarm, it will be play audio to alarm. Choose the sound alarm file (set at the "Configuration > Alarm > Sound Alarm Output"). | [How to set] Click to enable Audio Detection Alarm [Default value] OFF |
| Flashlight alarm | Enable, when it is triggered alarm, it flashes the light. But when users set the display mode to Mode 5 at "Configuration > Thermal > Led Control Param "interface, the ligth will be always on for 15s, not flash when it is alarm. | [How to set] Click to enable Flashlight Alarm. [Default value] OFF |
| Sensitivity | The sensitivity of detecting smoker, when the value is high, the alarm can be triggered easily, but the accuracy will be lower. | [How to set] Choose from the drop-down list [Default value] 5 |
| Alarm Record | If you install SD card, enable this function, the device will record the alarm video. | [How to set] Click to enable Alarm Record. [Default value] OFF |
| SMTP | Enable the button to enable SMTP serve. | [How to set] Click to enable SMTP. [Default value] OFF |
| FTP Upload | Enable the button to enable File Transfer Protocol. | [How to set] Click to enable FTP Upload. [Default value] OFF |
| Video Stream Draw Line | Enable the button to enable Video Stream Draw Line, the setting area frame will show on live video. | [How to set] Click to enable Video Stream Draw Line. [Default value] OFF |

Step 3 Set a deployment area. Move the cursor to the drawing interface and click to

generate a point, move the cursor to draw a line, and then click to generate another point. This is how a line is generated. In this way, continue to draw lines to form any shape, and right-click to finish line drawing.

- A drawn line cannot cross another one, or the line drawing fails.
- Any shape with 32 sides at most can be drawn.
- The quantity of deployment areas is not limited yet and will be described in future when a limit is applied.
- Step 4 Set deployment time.

Method 1: Click left mouse button to select any time point within 0:00-24:00 from Monday to Sunday.

Method 2: Hold down the left mouse button, drag and release mouse to select the deployment time within 0:00-24:00 from Monday to Sunday.

Method 3: Click in the deployment time page to select the whole day or whole week.

• When you select time by dragging the cursor, the cursor cannot be moved out of the time area. Otherwise, no time can be selected.

Deleting deployment time: Click again or inverse selection to delete the selected deployment time.

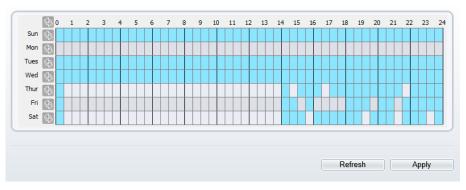

Figure 7-2 Deployment time setting interface

| Valid Signal | Close |
| Alarm Output Mode | Switch Mode |
| Alarm Time(ms)(0:Continuous) | 0 |
| Timing Alarm Output | OFF |
| Manual control | Start Stop |
| | |
| | Refresh Apply |

- Step 2 Set alarm output of channel, name, enable valid signal and alarm time choose alarm output mode.
- Step 3 You can also control alarm manually, click **Start** button to start alarm, click stop button to end the alarm .

---End

9.2 Disk Alarm

Procedure

Step 1 Select **Configuration > Alarm > Disk Alarm** to access the disk alarm setting interface, as shown in Figure 9-2.

Figure 9-2 Disk alarm interface

🖻 Disk Alarm

| Disk Full Alarm | OFF |
|---------------------------|---------------|
| Alarm Interval(10-86400S) | 10 |
| Output Channel | |
| | |
| | Refresh Apply |

- Step 2 Enable the disk full alarm, when the disk is full it will alarm.
- Step 3 Set alarm interval and tick output channel.
- Step 4 Click Apply to save the settings, click refresh will return last settings.

---End

9.3 Network Alarm

Procedure

Step 1 Select **Configuration > Alarm > Network Alarm** to access the network alarm setting interface, as shown in Figure 9-3.

Figure 9-3 Network alarm interface

🖻 Network Alarm

| Network Card ID | 1 | • |
|---------------------------|---------|-------|
| Exceptional Alarm | | ON |
| Alarm Interval(10-86400S) | 10 | |
| Output Channel | | 12 |
| Alarm Record | | OFF |
| | | |
| | Refresh | Apply |

- Step 2 Choose network card ID and enable exceptional alarm to set alarm interval. Tick output channel.
- Step 3 Click **Apply** to save the settings, click refresh will return last settings.

---End

9.4 I/O Alarm Linkage

Procedure

Step 1 Select Configuration > Alarm > I/O Alarm Linkage to access the I/O alarm Linkage setting interface, as shown in Figure 9-4.

Figure 9-4 I/O alarm linkage interface

10.12 QOS

Description

If the device is connected to a router or switch with a QOS function, and the priority rule of the corresponding mark is configured on the network device, the network device will preferentially pass the data packet of the corresponding mark.

Procedure

Step 1 Choose Configuration > Network Service > QOS.

The **QOS** page is displayed, as shown in Figure 10-14.

Figure 10-14 QOS page ▲udio/Video Dscp(0-63) 52 Alarm Dscp(0-63) 0 Command Dscp(0-63) 0 Refresh Apply

- Step 2 Input the value range from 0 to 63 (audio/video dscp, alarm dscp and command dscp).
- Step 3 Click Apply.

The message "Apply success!" is displayed, and the system saves the settings.

----End

A Troubleshooting

| Common Trouble | Possible Cause | Solution |
|--|--|--|
| Unable to access the web | Network is not connected. | Connect the network cable of the camera to the PC to check whether the network cable is in good contact. Run the ping command to check the network connection and whether the device works normally. |
| | IP address is occupied. | Directly connect the camera to the PC, and reset the IP address of the camera. |
| | The IP addresses of the PC and the device are in different networks. | Check the IP address, subnet mask and gateway setting of the camera. |
| The measured temperature is not accurate. | The device is just powered on, and the temperature of the cavity is unstable. | The temperature of the cavity is stable within 15 to 30 minutes after the device is powered on. |
| | The target configuration is incorrect. | Check whether the emission rate and distance of the target are configured correctly. |
| An error occurs in accessing the web of the device after the upgrade. | The data in the cache of browser is not updated in time. | Delete the cache of browser. The steps are as follows (taking IE9 as an example): Open the Internet Explorer. Press Ctrl + Shift + Delete on keyboard. The Delete Browsing History dialog box appears. Select all check boxes. Click Clear now . Relogin the web page of the camera. |
| Upgrade failed. | No network cable is connected. The network setting is incorrect. | Ensure the upgrade network is connected. Check whether the network setting is correct. |
| | The upgrade package is incorrect. | Perform the correct upgrade package again. |

| Common Trouble | Possible Cause | Solution |
|------------------------------|------------------------|--|
| The temperature is too high. | correctly' by checking | napping ' and ' thermal calibration is configured highest temperature object at two channels. ure data is inconsistent with the actual temperature, e too high. |
